Welcome: Meet Jordan and the assignment

DD Daniel Davies

Powered by Articulate

Welcome

Welcome to this short course on using generative AI with integrity.

This course is for Level 4 business students. It is written in plain English. Many students on this course use English as an additional language. That is expected, and it is welcome.

The course takes about 10 to 15 minutes. You can pause and come back.

You will follow a student called Jordan Ellis through one assignment. Jordan is a generic example only. This is not a real student, and this is not a real module.

By the end, you will be able to:

- check your own module rules before you use a generative AI tool on an assignment

- make careful choices about planning, sources, drafting, and declaring use

- explain why you must check references, and why you should keep your own voice

- write an honest statement of use when your module asks for one

This course was designed by Daniel P Davies, Associate Lecturer at Liverpool John Moores University. He teaches business, and his doctoral research looks at how Level 4 international business students can use feedback and assessment well, including support from generative AI.

The careful choice is not always the fastest one. It is the one you can stand by.

How to use this course

Follow these four steps. They explain how the decisions work.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Step 1

Step 1: Read Jordan's situation

You will first see the assignment and a generic module rule. Then you will make five decisions with Jordan.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Step 2

Step 2: Choose an option at each decision

Each decision is a practice question. One option is the careful, honest path. The other options show what often goes wrong. Read the feedback. It tells you what happens next in the story.

Powered by Articulate
Powered by Articulate

Step 3

Step 3: Look back, then check your learning

After the five decisions, you will see the typical outcomes of stronger and weaker paths. Then there is a short quiz.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Step 4

Step 4: Check your own module rules

The rule in this course is a generic example only. Your real rules are in your module handbook. If you are unsure, ask your tutor before you use a tool.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Summary

Check your own module rules before you use a tool.

A note about the examples

Jordan Ellis, the company Harbour & Oak, the city Westhaven, the company pack, and the module rule are all generic examples only. They were written for teaching. They are not real student work, and they do not come from a real module.

Your own assignments may look different. The choices you practise here will still transfer: read the rules, keep the thinking in your own hands, check what a tool gives you, and be honest about how you used it.

Lesson 1: Getting started, planning, and sources

DD Daniel Davies

Powered by Articulate

Jordan's assignment

Jordan Ellis is a Level 4 business student. The next assignment is a 1,000-word management briefing.

Generic example task:

Recommend whether Harbour & Oak, a fictional UK homeware retailer, should enter the Westhaven market through a franchise, a joint venture, or e-commerce only. Use the company pack provided. The pack, the company, and the city are invented for teaching.

Generic example module rule:

You may use a generative AI tool to help with planning and to check your writing. The analysis and the final wording must be your own. You must include a short, honest statement of how you used any AI tool. If you are unsure, ask your tutor.

Jordan has one week. The pack is short, but it includes a few figures and one clear risk: rents in the city centre have been rising quickly. Jordan wants to do well, and also feels short of time.

In the next blocks, you will choose what Jordan should do. After you choose, read the feedback. It is part of the story.

Decision 1. A classmate says: "Paste the brief and the whole company pack into a public chatbot, and ask it to write a first draft. It will save you tonight." What should Jordan do?

- Paste the full brief and the whole pack into a public chatbot, and ask for a complete first draft.
- Read the pack first, make a page of notes in their own words, and check the module rule before sharing any task material with a tool.
- Do nothing this week, and make a decision the night before the deadline.

SUBMIT

Decision 2. Jordan has now read the pack and has a page of notes. How should Jordan use a generative AI tool at the planning stage, given the generic module rule in this course?

- Ask the tool to write the whole 1,000-word briefing, then

Powered by Articulate

change a few words and submit it.

Ask the tool to suggest a possible structure and some questions to test each entry mode, then write an outline in their own words using evidence from the pack.

Use no tool, and also make no plan, then start writing from the first line of the briefing.

SUBMIT

Decision 3. Jordan asks a tool, "What sources would support a franchise in Westhaven?" The tool lists three journal articles, with author names, years, and titles that look real. What should Jordan do?

Copy the three references into the briefing, because they look academic and they support the recommendation.

Check each reference. If a source cannot be opened, do not use it. Build the argument from the company pack, and from sources Jordan can actually find and read.

Leave out all evidence, and write "research shows" in front of every claim.

Lesson 3 of 6

Lesson 2: The draft and the statement

DD Daniel Davies

Powered by Articulate

From outline to submission

Jordan now has a short outline and a page of notes from the pack. The rising-rent risk is on that page. The next two decisions are about the draft, and about the statement of use that the generic module rule requires.

Remember: this rule is a teaching example. Your own handbook may be stricter, or it may be more open. Always follow your own module rule, and ask your tutor if you are not sure.

Powered by Articulate

Decision 4. Jordan writes a rough draft in their own words. It is a little uneven, but it does discuss the rent risk. A tool then offers a polished rewrite. The rewrite sounds smooth and "academic," but it cuts the rent risk and changes the recommendation. What should Jordan do?

Powered by Articulate

- ○ Replace the draft with the tool's version, and change only a few words so that it feels like theirs.
- ○ Keep their own draft as the base. Use the tool's suggestions to improve a few unclear sentences, put the

rent risk back at the centre of the argument, and keep their own recommendation.

Submit the rough draft as it is, without reading it again, so that no tool can be said to have touched it.

SUBMIT

Powered by Articulate

Decision 5. The generic module rule asks for a short, honest statement of how any AI tool was used. Jordan did use a tool for planning questions and for checking some sentences. What should Jordan do?

Write "I did not use AI," because they are worried that honest use will be marked down.

Write a short, honest statement, for example: that a tool was used to suggest planning questions and to check some sentences, and that the analysis, the recommendation, and the final wording are Jordan's.

Write nothing about the tool, and hope that no one asks.

Lesson 4 of 6

Lesson 3: Looking back at the choices

DD Daniel Davies

Powered by Articulate

What those choices lead to

You have now made five decisions with Jordan. The next block sets out typical outcomes. These are still generic teaching examples. They are not predictions about any real person, and they are not a real marking result.

As you read, notice the pattern. The stronger path keeps the thinking, the evidence, and the honesty in Jordan's hands. The weaker path often feels faster on the day, and then creates a problem later.

Powered by Articulate

IF THE WHOLE BRIEF IS PASTED INTO A PUBLIC TOOL	IF THE TOOL IS ASKED TO WRITE THE WHOLE BRIEFING	IF UNCHECKED REFERENCES ARE COPIED IN	IF A POLISHED REWRITE REPLACES JORDAN'S DRAFT	STAT TH SA

Jordan may have shared task material they should have kept in the module. They also start from a fluent draft that is not their own, and that may miss a key risk in the pack. A slower start, with their own notes, would have been safer and would have kept the thinking in their hands.

Powered by Articulate

IF THE WHOLE BRIEF IS PASTED INTO A PUBLIC TOOL	IF THE TOOL IS ASKED TO WRITE THE WHOLE BRIEFING	IF UNCHECKED REFERENCES ARE COPIED IN	IF A POLISHED REWRITE REPLACES JORDAN'S DRAFT	STAT TH SA

The generic rule in this course is broken, because the analysis and the wording would not be Jordan's. The paper may also sound confident while missing the case evidence. A better use, if the rule allows it, is to ask for a structure or some questions, then write the outline from the pack.

IF THE WHOLE BRIEF IS PASTED INTO A PUBLIC TOOL	IF THE TOOL IS ASKED TO WRITE THE WHOLE BRIEFING	IF UNCHECKED REFERENCES ARE COPIED IN	IF A POLISHED REWRITE REPLACES JORDAN'S DRAFT	STAT TH SA

Some of those references may not exist, or may not say what the tool claimed (Perkins, 2023). Jordan would then be using sources they have not read. The stronger move is always the same: open the source, or do not use it. The company pack is already there to support the recommendation.

IF THE WHOLE BRIEF IS PASTED INTO A PUBLIC TOOL	IF THE TOOL IS ASKED TO WRITE THE WHOLE BRIEFING	IF UNCHECKED REFERENCES ARE COPIED IN	IF A POLISHED REWRITE REPLACES JORDAN'S DRAFT	STAT TH SA

The writing may sound smoother, but the judgement may get worse. In this story, a rewrite cut the rent risk and changed the recommendation. Keeping the student's own draft, and using a tool only to improve clarity, protects both the rule and the argument.

IF THE WHOLE BRIEF IS PASTED INTO A PUBLIC TOOL	IF THE TOOL IS ASKED TO WRITE THE WHOLE BRIEFING	IF UNCHECKED REFERENCES ARE COPIED IN	IF A POLISHED REWRITE REPLACES JORDAN'S DRAFT	STAT TH SA

Powered by Articulate

The generic rule asked for an honest statement. Hiding permitted use, or saying nothing, still fails that rule. Perkins (2023) argued that making use clear is a central integrity issue, and that local rules decide what is allowed. A short, accurate statement is the professional close to the task.

A short reflection, for you

This is not marked. Write a few lines in your notebook, or in a notes app.

1. Which of Jordan's five decisions is most relevant to the way you currently work?

2. What is one thing you will do on your next assignment, before you use a generative AI tool, or before you decide not to use one?

3. Where will you check your own module rule, if you have not checked it recently?

If you are unsure about a real task, ask your tutor. A short question before you start is better than a difficult conversation after you submit.

If you cannot explain the work in your own words, it is not yet ready to submit.

Question

01/04

What is the first thing you should do before you use a generative AI tool on an assignment?

- Paste the brief into a tool at once, so that you do not waste time.
- Check your own module handbook, and ask your tutor if you are unsure.
- Wait until after you submit, and then see whether anyone asks.
- Follow whatever a classmate says they did last term.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Question

02/04

A generative AI tool lists three journal articles that seem to support your recommendation. What should you do?

- Copy the three references into your work, because they look academic.
- Check each reference. If you cannot open a source, do not use it.
- Use the titles, but change the years, so that the list looks more current.
- Ask the tool to invent two more sources, so that the list looks longer.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Question

03/04

In this course, what does it mean to keep your own voice in a draft?

- Changing a few words in a tool-written paper, so that it is not a word-for-word copy.
- Using the most complex words you can find, so that the writing sounds academic.
- Keeping your own draft and your own recommendation as the base, and only using a tool, if the rules allow it, to help you improve clarity.
- Removing all punctuation, so that a tool cannot have written it.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Question

04/04

Why does this course ask Jordan to include a short, honest statement of AI use?

- Because any use of a tool is always academic misconduct, even when the handbook allows it.
- Because the generic module rule asked for one, and because being clear about how the work was produced is part of acting with integrity.
- Because a long statement can replace the briefing itself.
- Because tutors only want to know which brand of tool you used.

Lesson 6 of 6

Before your next assignment

DD Daniel Davies

Powered by Articulate

A short checklist

Before you start your next real assignment, walk through this list:

1. Read the brief, the criteria, and your module rule on generative AI. If anything is unclear, ask your tutor.

2. Make your own notes first, so that the thinking starts with you.

3. If a tool is allowed, use it only in the way the rule allows.

4. Check every source you did not find yourself. If you cannot open it, do not use it.

5. Keep your own recommendation and your own wording as the base of the draft.

6. If a statement of use is required, write it honestly.

7. Check that you can explain the work out loud, in your own words.

This list is a study habit. It is not a substitute for your own handbook.

Further reading

These are the sources cited in this course. All were opened and checked when the script was written.

Perkins, M. (2023). Academic Integrity considerations of AI Large Language Models in the post-pandemic era: ChatGPT and beyond. Journal of University Teaching and Learning Practice, 20(2). https://doi.org/10.53761/1.20.02.07

If you would like a short staff-facing explanation of how lecturers may set a level of AI use for a task, you can also look at:

Perkins, M., Roe, J., & Furze, L. (2025). Reimagining the Artificial Intelligence Assessment Scale: A refined framework for educational assessment. Journal of University Teaching and Learning Practice, 22(7). https://doi.org/10.53761/rrm4y757

You do not need to read that second paper in order to complete this course. Your own module handbook is the rule that applies to your work.
